Planning an experiment

Planning an experiment

```
%=====Fake data=====
en=[0:10:500];
par_file='C:\Russell\Horace_workshop\Matlab\4to1_102.par';
sqw_file='C:\Russell\Horace_workshop\Matlab\my_fake_file.sqw';
efix=550;
psi=[-75:5:75];
emode=1;
alatt=[2.87,2.87,2.87];
angdeg=[90,90,90];
u=[1,0,0]; v=[0,1,0];
omega=0; dpsi=0; gl=0; gs=0;

fake_sqw(en, par_file, sqw_file, efix, emode, alatt, angdeg, ...
          u, v, psi, omega, dpsi, gl, gs);

%Play around with different proj.u and proj.v, always remembering to ensure that
%the two are orthogonal to one another!
proj.u=[-1,-1,1]; proj.v=[0,1,1]; proj.uoffset=[2,0,0,0]; proj.type='rrr';

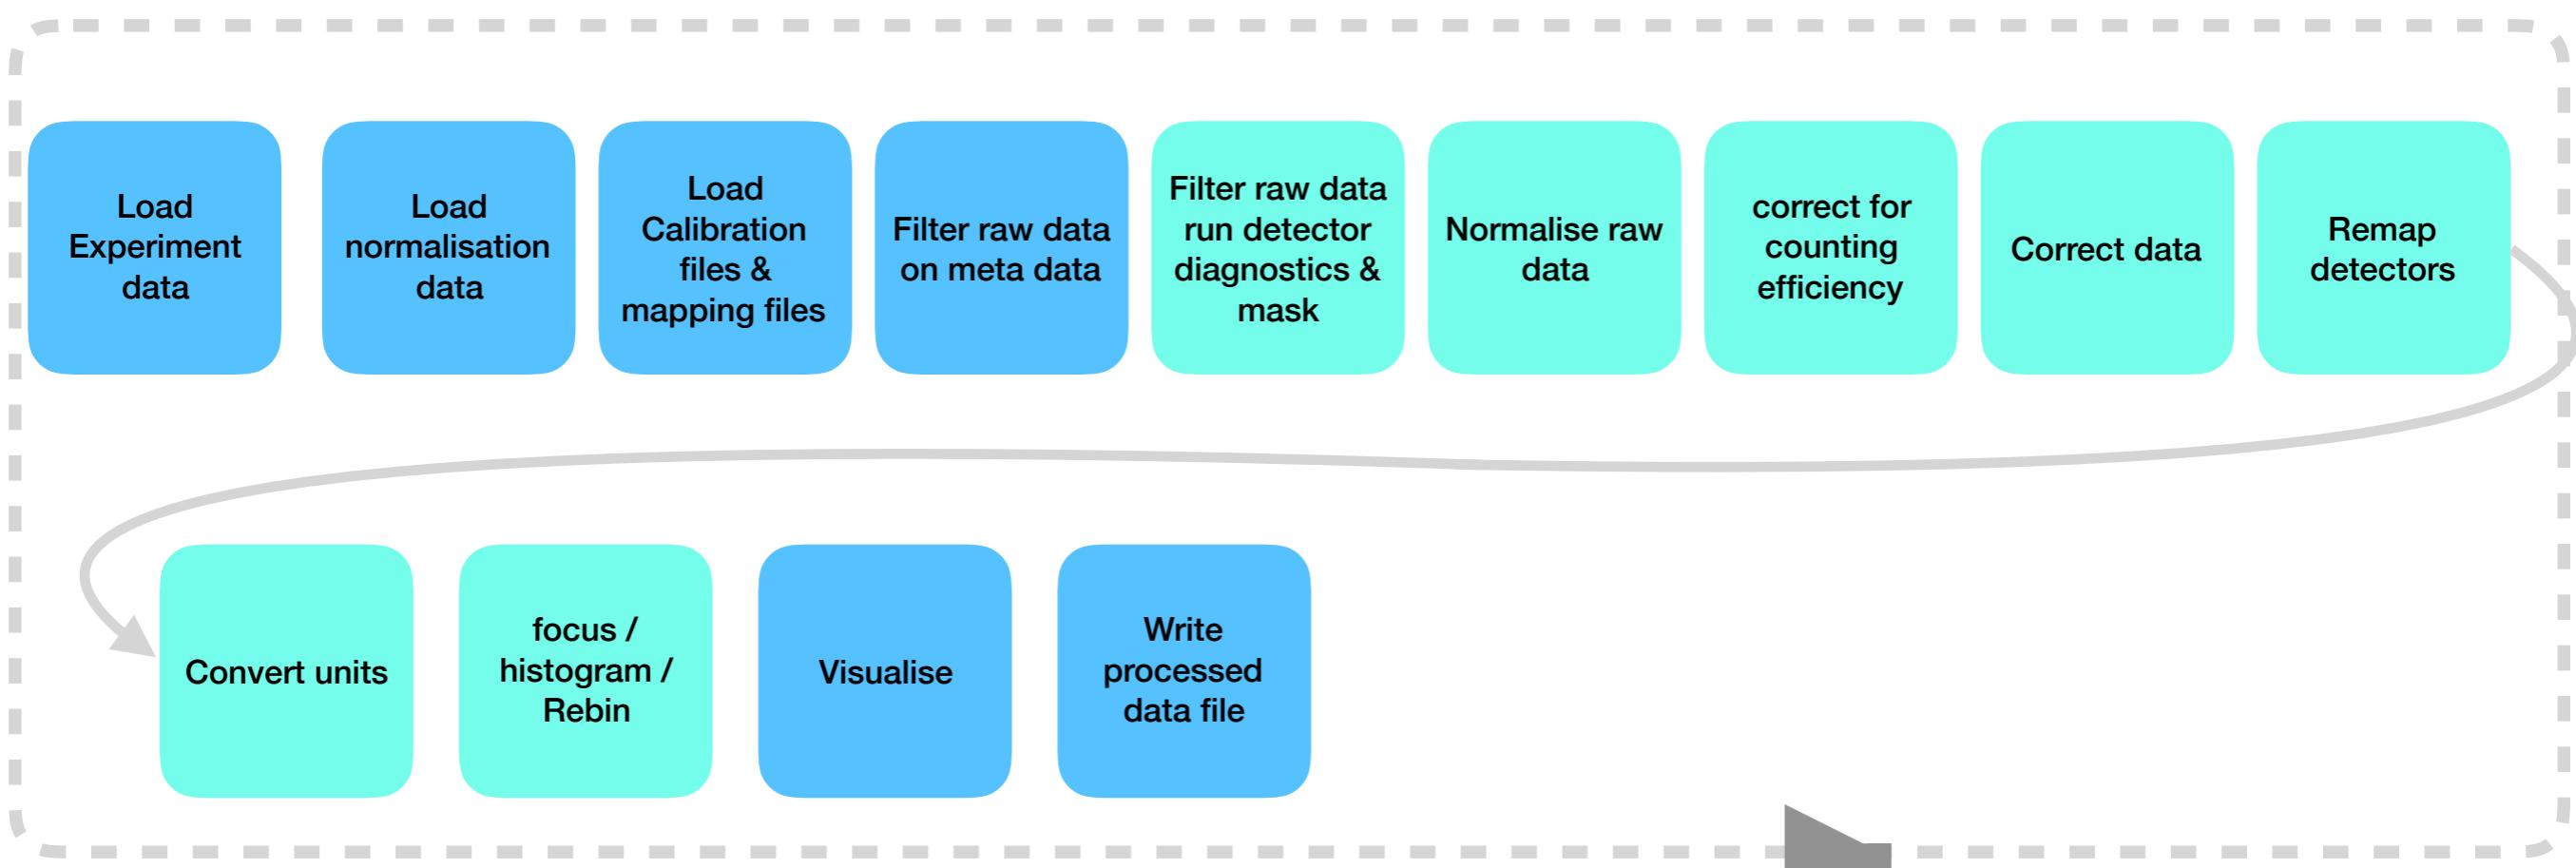

my_cut=cut_sqw(sqw_file,proj,[-1,0.05,1],[-0.1,0.1],[-0.1,0.1],[0,10,400],'-nopix');

plot(compact(my_cut));

%Notice that the image here is colour coded according to the value of psi
%for detectors from the run that contributed to these data.

%You can also fire up the horace planner interactive gui, for a quick and dirty way of
%planning your experiment
horace_planner
```

Data Processing / data reduction

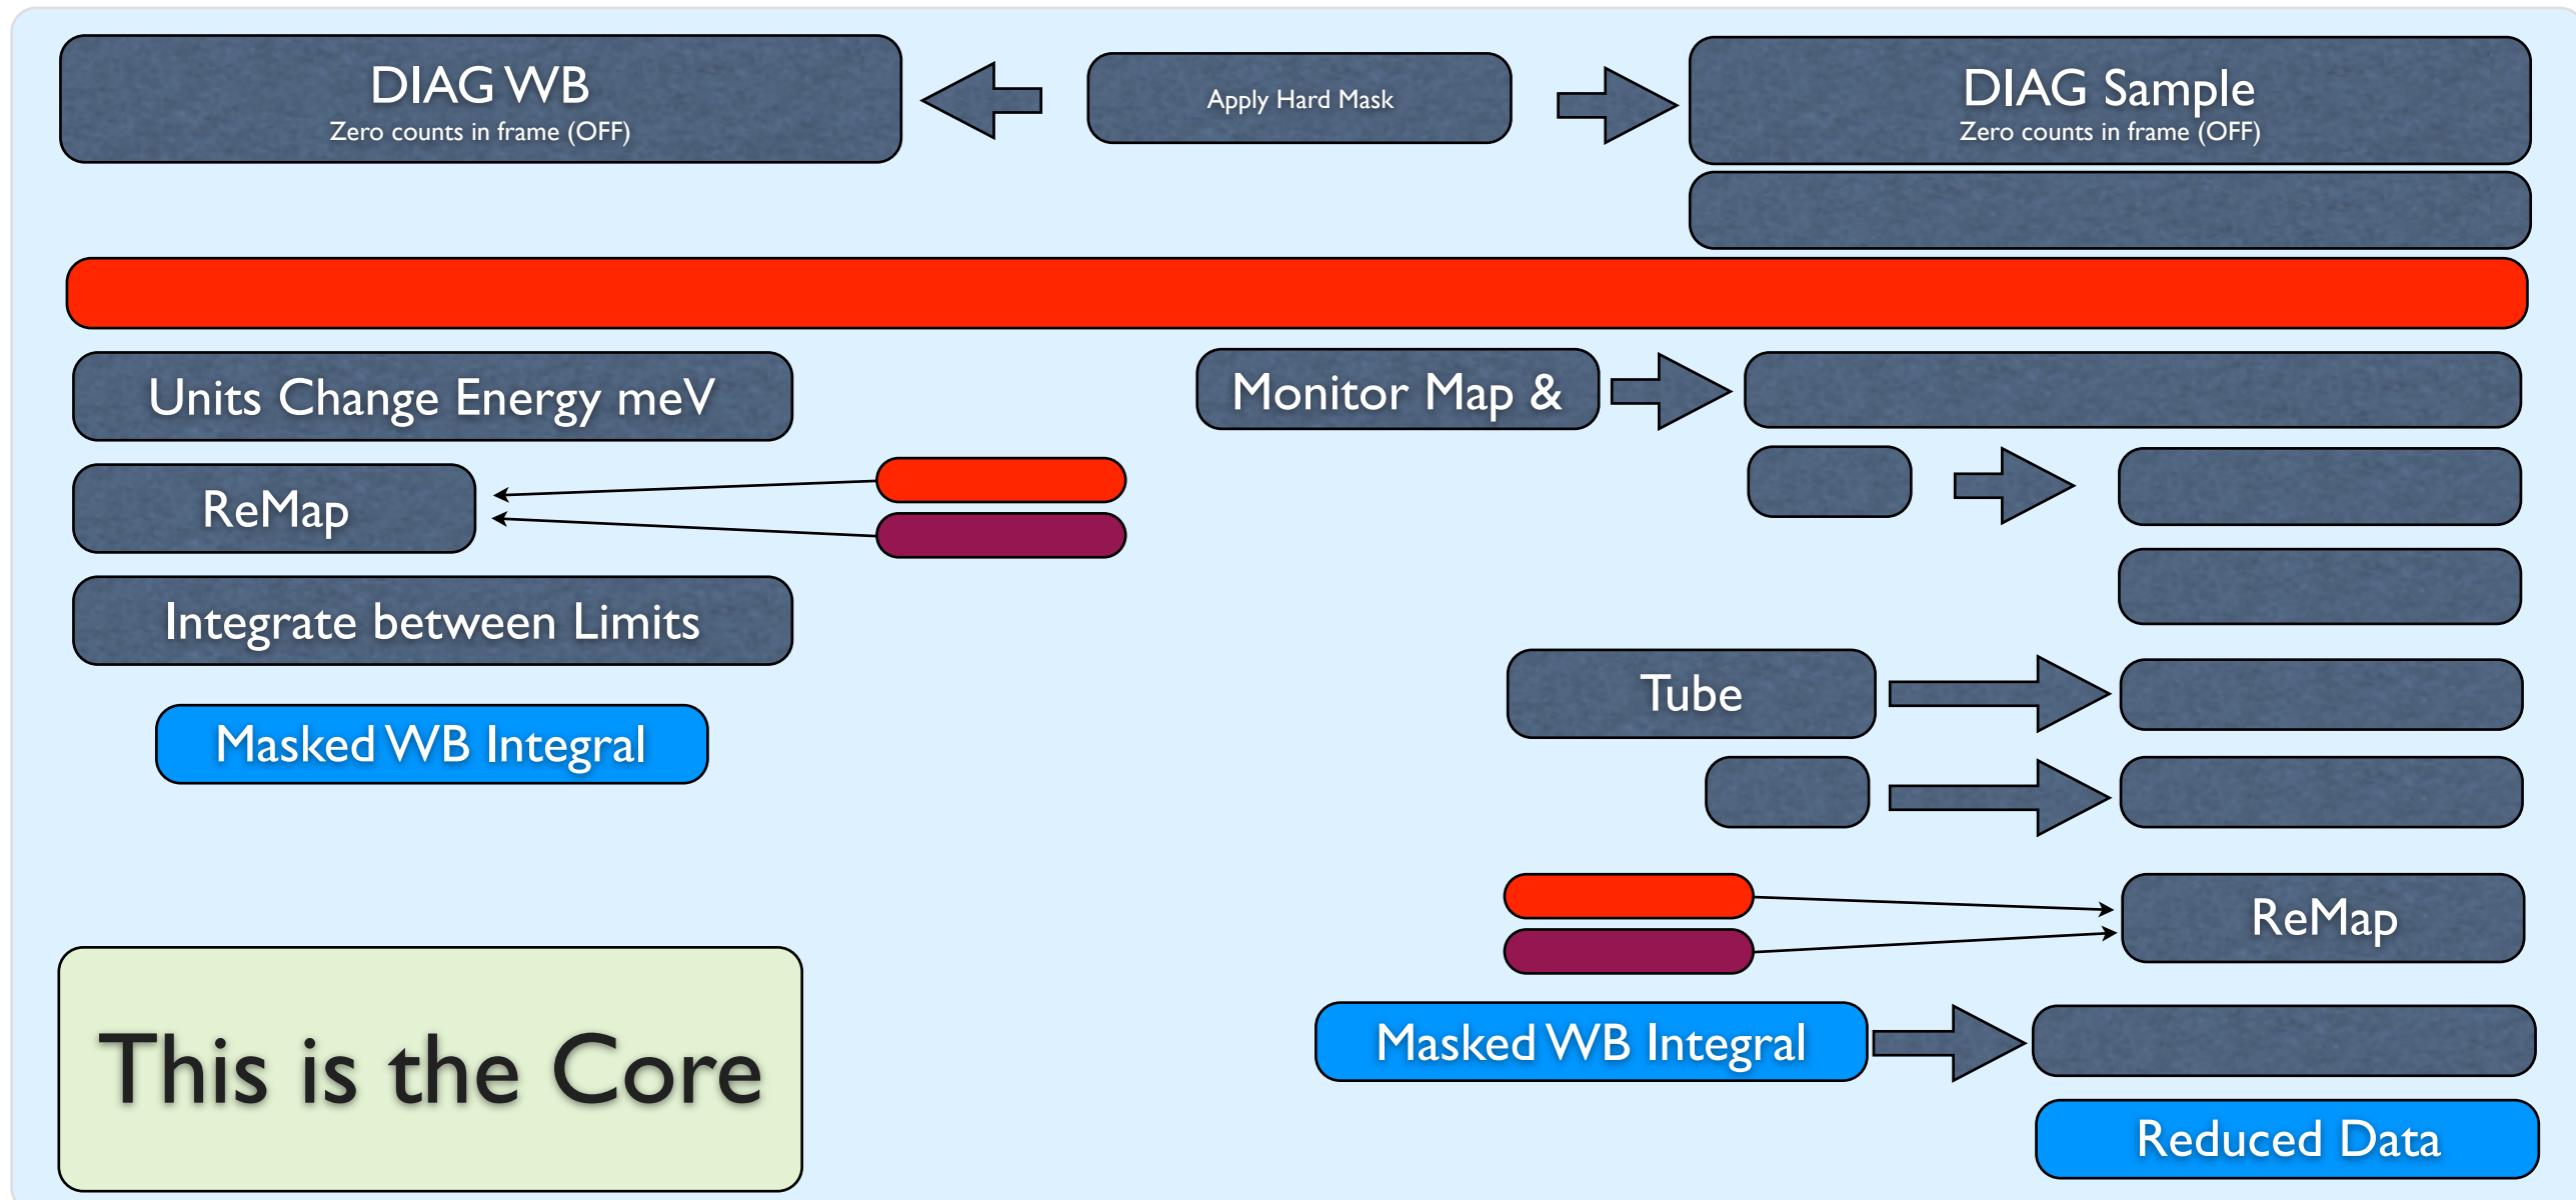

Each box requires a myriad of input data or parameters which have a direct effect on the processed data.

Repeat n times

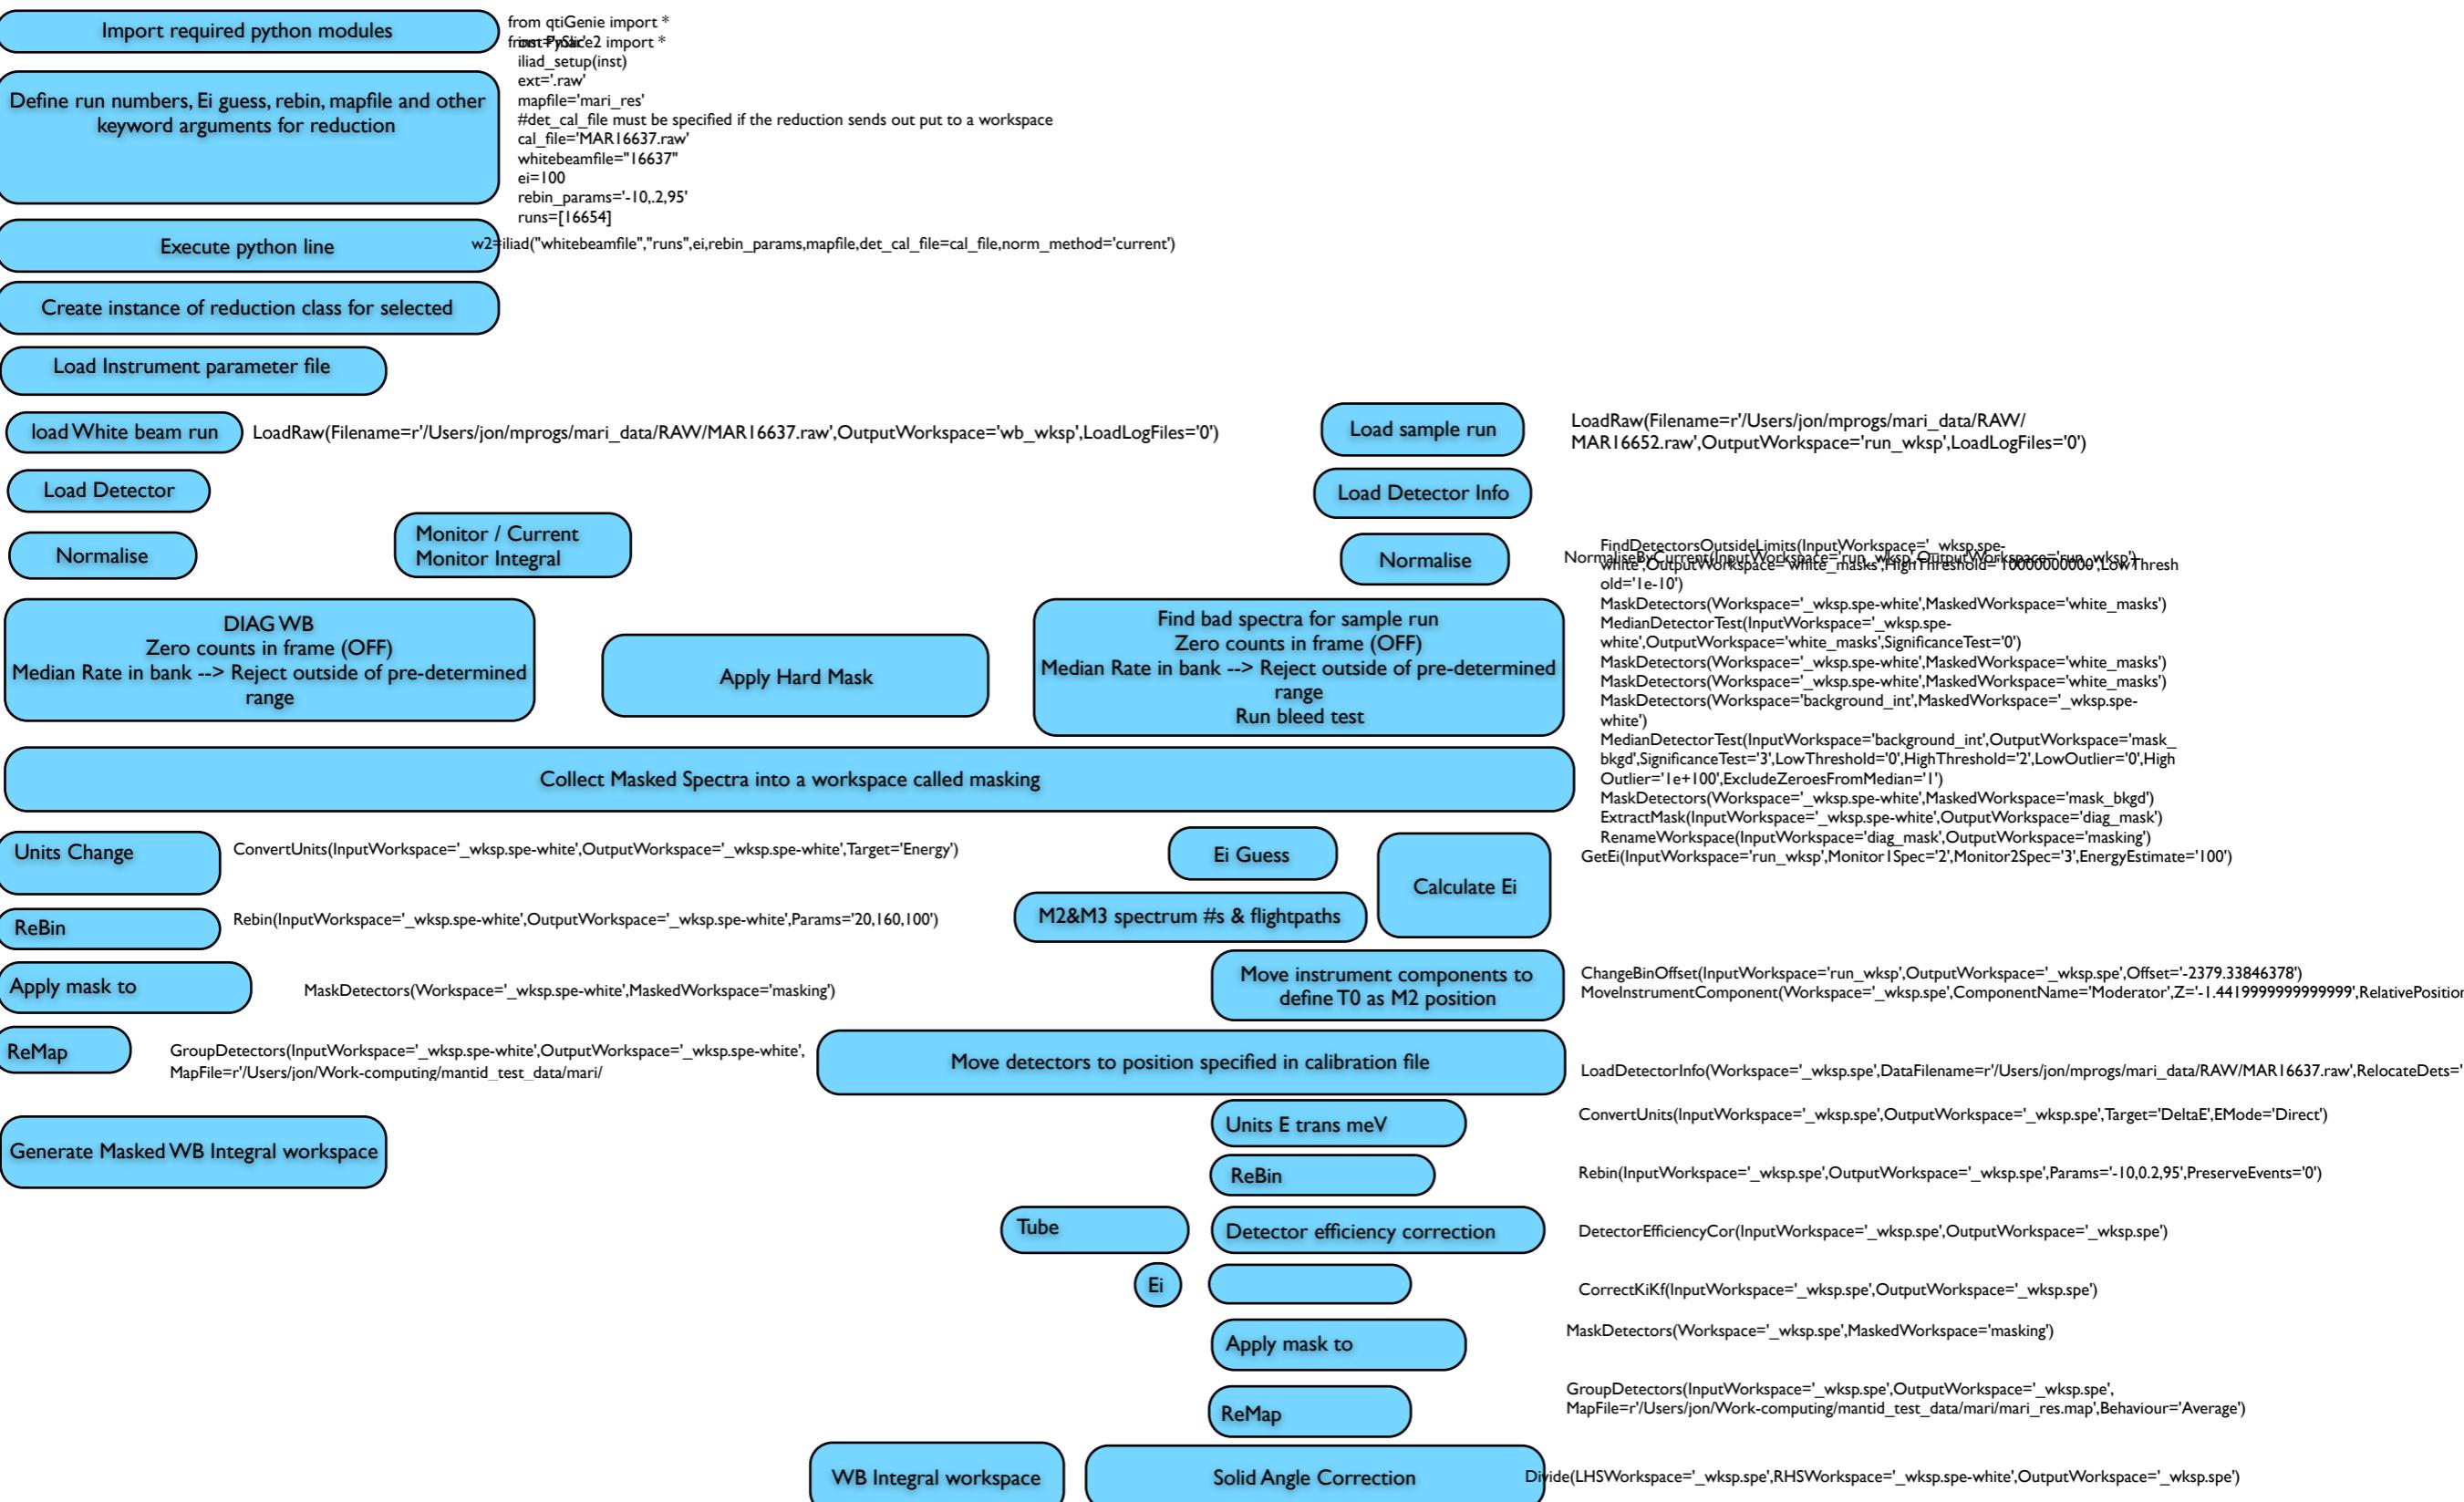

Is part of a data reduction workflow

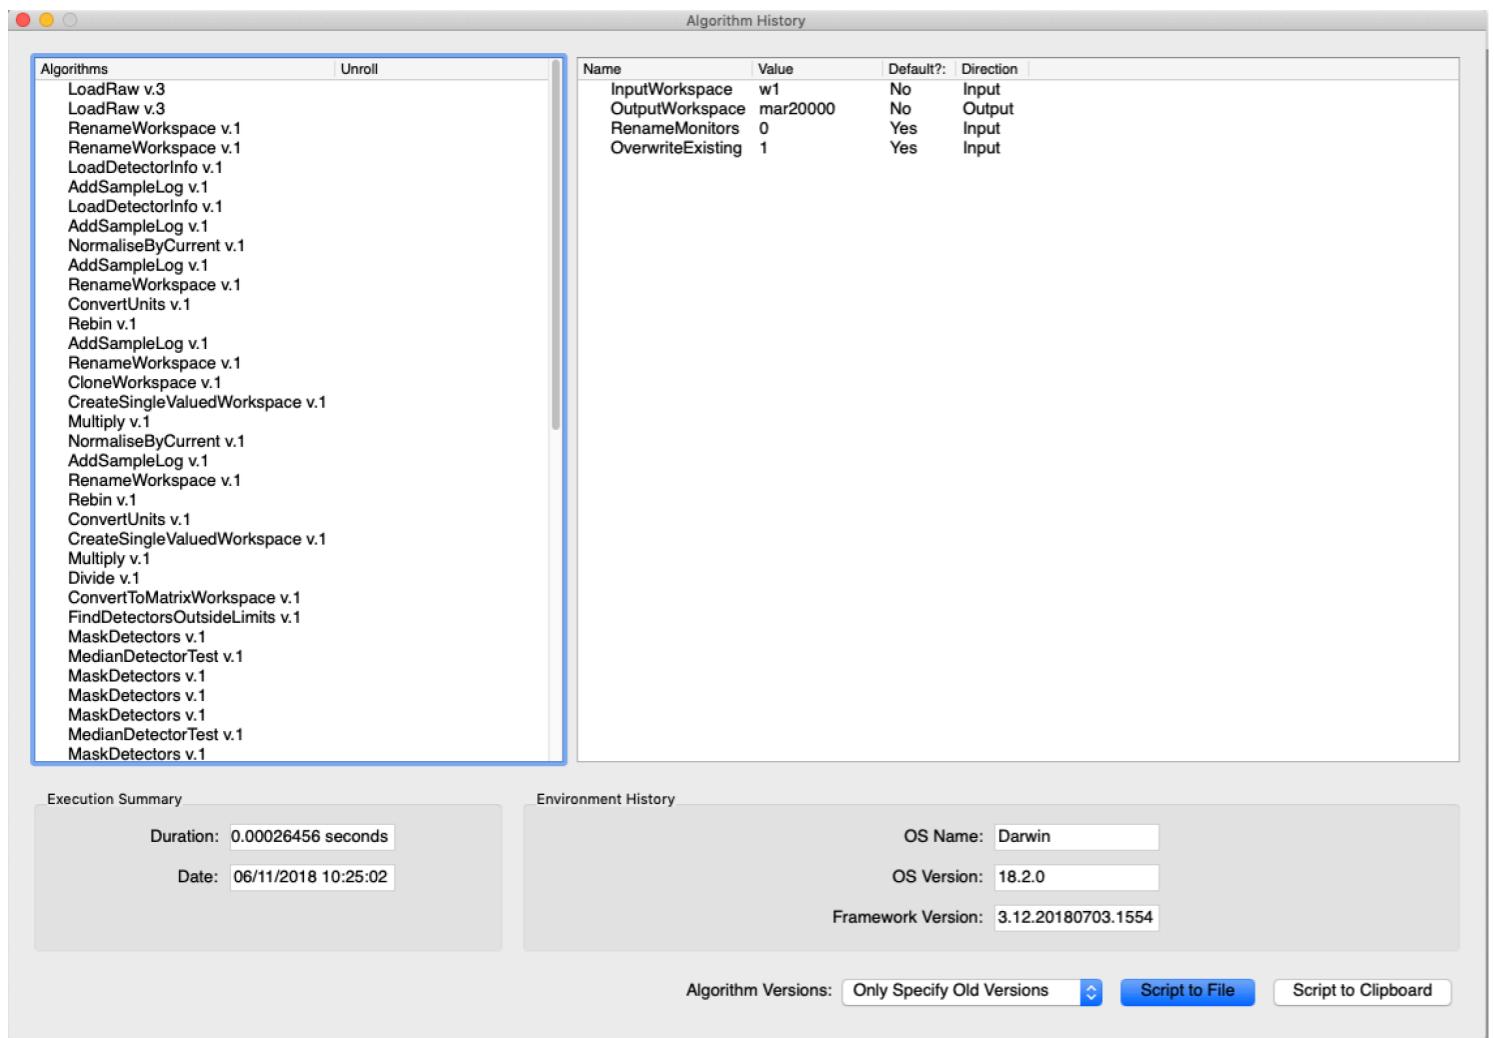

ISIS Direct geometry reduction A: Core

White beam data is the ISIS term for the data set that corrects for counting efficiency of each detector channel

Direct geometry data reduction workflow - Histogram mode

Workspace

+ data

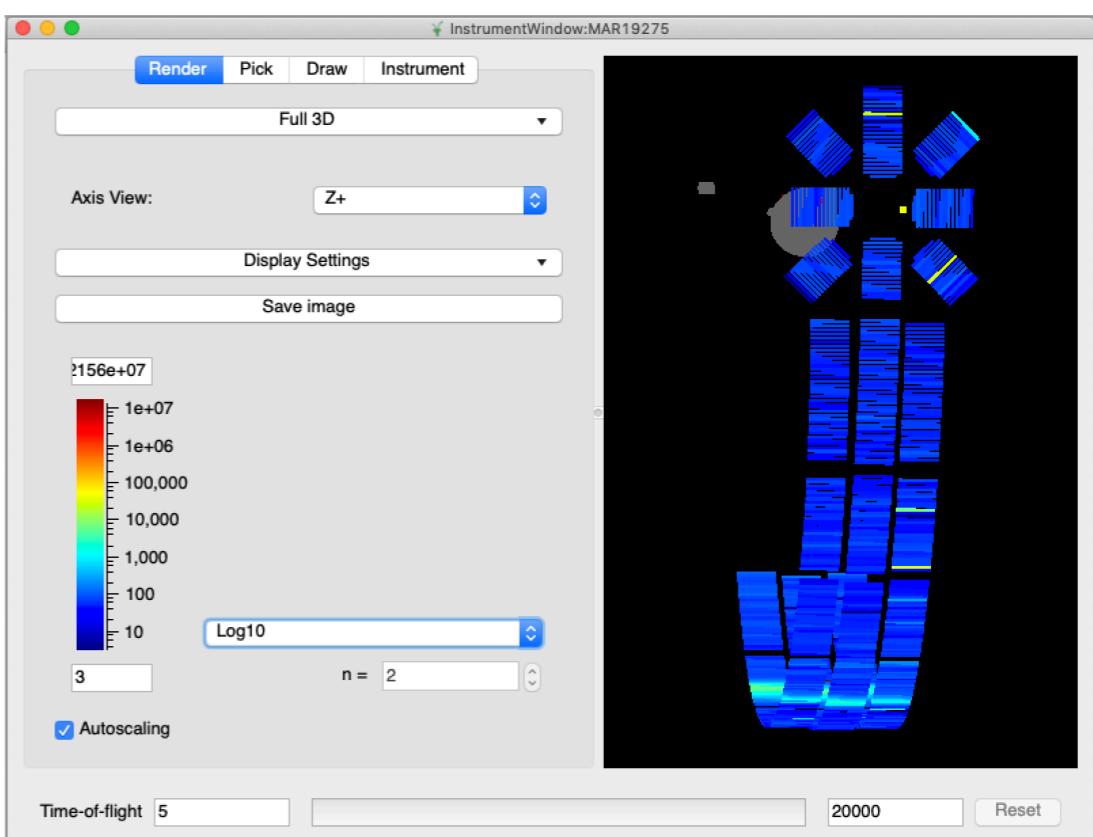

+ Instrument information
+ log information

- No real sample info - just what is in data file i.e. title str
- instrument geometry only partial
- not always upto date

▼ mar20000

Workspace2D

Moments and Plots for Sample 1

Total ζ

Temp (K)

Legend: Total Spin Moment (black square), Nd spin (red circle), Ir spin (blue triangle)

Temp (K)	Total Spin Moment	Nd spin	Ir spin
0	-1.8	-	-
5	-1.6	-	-
10	-1.7	-	-
15	-1.8	-	-
20	-1.9	-	-
30	-2.0	-	-
40	-2.1	-	-
50	-2.2	-	-
60	-2.3	-	-

Using SQUID measurement to get the orbital and assuming Nd orbital = -2*Nd spin, the orbital moments were calculated An Ir average was plotted too (0.5 +/- 0.2) MuB/FU

HEA - January 2018

Created: 23 Jan 2018 Updated: 23 Jan 2018

You are viewing a note that is shared with 9 people

Total Orbital (MuB/FU)

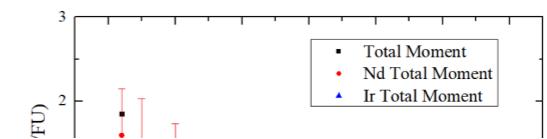

Temp (K)

Legend: Total Orbital (black square), Nd Orbital (red circle), Ir Orbital (blue triangle)

Temp (K)	Total Orbital	Nd Orbital	Ir Orbital
0	3.8	3.2	0.5
5	3.5	3.0	0.5
10	2.8	2.5	0.5
20	1.2	1.0	0.5
30	1.0	0.8	0.5
40	1.2	1.0	0.5
50	1.0	0.8	0.5
60	1.2	1.0	0.5

0.5057 +/- 0.181258

From all this total moment contributions were calculated:
Interestingly giving an Ir total moment of (0.0 +/- 0.2) MuB/FU

Plate 3 Ni XMCD

Sequence 26

Don't know if it's just a normalisation issue but the XMCD for Ni in sequence 26 looked odd. I've screenshotted the XMCD , XAS and ch0 below.

TURNS OUT there was a problem with saturation. After speaking with Kotani-san, he spotted a few other problems, all on the NiFeCo sample (left hand sample) and he turned the gain down and set up some new sequence files to repeat the dodgy scans - see sequences 30 and 31 (and possibly 29_2)

ch0 ch1 ch1_XAS ch1_MCD ch2 ch2_XAS ch2_MCD ch3 ch3_XAS ch3
