# ODIN: Status of NCR's

# ODIN - SAR

## Status of NCR's and NIT's

There are a total of 3 NCR's related to ODIN

### NCR 10617:

Gaps at the guide shielding are larger than nominal

### NCR 10527:

Opening in the back wall was not aligned with the direct beam: This enlargement ensures that the beam will hit the beam stop and not the wall.

### NCR 10454:

Isolation for ODIN's FOC1,2,3 and 4 has been checked in the bunker.

Nonconformity		Description	
[R]		[R]	
10617	Oversized gaps in the ODIN Guide Shielding		
10527	ODIN - Beam stop opening enlargement		
10454	ODIN isolation issue		

Equipment		Equipment Description

# ODIN - SAR

## Status of NCR's and NIT's

### NCR 10617

- Some gaps at the guide shielding are larger than nominal.
- ESS-5720980 represent measure results for all gaps and ESS-5214439 is a map of oversized gaps.
- RP group will measure in the area once the instrument is operational and decide if more shielding is needed to cover the gap.

**Owner: RP**

This NCR will stay open until ESS reaches steady state operations at 5MW. (unless ESS will change the formal way of tracking this NCR).

**Status: Monitor**

**Implication for ODIN: ok**

# ODIN - SAR

## Status of NCR's and NIT's

### NCR 10527

Based on <https://jira.ess.eu/browse/SAM-62>, the opening in the back wall was not exactly aligned with the direct beam (or where we expect the direct beam to be), we had to enlarge the hole slightly. This enlargement ensures that the beam will hit the beam stop and not the wall.

Created By:	EGLALUCA
Date Created:	17-FEB-2025 10:01
Updated By:	GHINWAKELLESLY
Date Updated:	26-FEB-2025 13:29

Regarding NC 10527: back when the opening was made, we have visited the ODIN cave together with Radiation Protection (Ana Cintas) and with Günther Muhrer (Group Leader, ESS Spallation Physics). The situation was reviewed on site, focusing on the enlarged opening in the back wall and the alignment with the beam stop.

Since the size, material and position of the beam stop itself have not been changed, the adjustment to the wall opening only affects the instrument performance – in a positive way – by ensuring that the full direct beam is intercepted by the beam stop instead of partially hitting the wall. From the shielding and safety perspective, the change does not introduce any negative impact; on the contrary, it helps to minimise unnecessary neutron activation inside the cave.

Radiation Protection will in any case survey the cave and beam-stop area during operation as part of their routine follow-up.

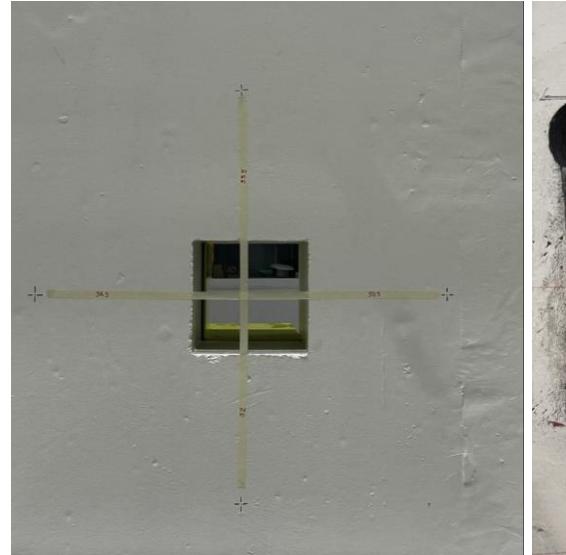

Based on this, we consider the non-conformity to be addressed and controlled.

Best regards,  
Robin

Connatser, Robert (ROBERTCONNATSER)

NSS will accept this issue as is and evaluate if there is an affect on the performance in operations.

# ODIN - SAR

## Status of NCR's and NIT's

### NCR 10454:

Isolation for ODIN's FOC1,2,3 and 4 has been checked in the bunker.

Stefan Pacoste from Q&C Division has provided an update on the NC:

*"I've looked at the NC 10454 as well so I think that I can propose a path forward for the closure of this NC. My proposal should comply to the requirements of ESS-0008702 - ESS Procedure for Management of Non-Conformities rev.10. Based on the comments in EAM this NC will become a permanent NC and could be closed by following the steps bellow:*

*Create a NC in Chess using the template ESS-0008823 rev 07. To speeding up the NC closure process I have filled in this template (see the file attached to this email).*

*Start the review workflow in Chess. The reviewers should be the people that were involved in the resolution of the NC (see EAM comment) and the approver should be the NC owner.*

*After the NC is released in Chess my colleagues from the QD will proceed with the NC closure (@Ghinwa Kellesly and @Conny Wendt)*

*Please review the information that I've added in the attached template and make any corrections if needed. I was not personally involved in this NC so there is a chance that I've missed something or misinterpreted some information.*

*Best regards,  
Stefan Pacoste"*

Based on the above, Stefan has provided a draft permanent NCR for review by the relevant stakeholders. NC will be closed once the report is released in CHESS

Created: 05-DEC-2025 09:47

Ghinwa Kellesly (GHINWAKELLESLY)

**Owner: ODIN**

**Status: Permanent NC to be released in CHESS**

**Implication for ODIN: Accept**

# ODIN: Status of NIT's

**There are a total of 39 NITs's related to ODIN**

**Why does ODIN 'only' have 39 NITs?**

- ODIN strongly benefits from work performed on TBL, LOKI, and BIFROST.
- ODIN team strategy: aim to solve issues as they arise 'on the spot,' avoiding the need for additional NITs (the number of NITs was reduced by approximately 80–120 this way)

## Status of NCR's and NIT's

NIT-375

TO DO

NCR 10551 NSS CUP ODIN - Seal weld union connecting to valve ESS.NSS.H01.ODIN.A05.W02.Q024

Other

TG5/iSAR

Unassigned

Giuseppe Aprigliano

### Reference to NCR in EAM

During pressure test the threaded union coupling towards the valve ESS.INFR.W04.W03.W06.Q05 was leaking. Unfortunately the threads have been damage and can not easily be replaced. Due to the location and difficulties to drain the system (CWL) it is suggested to seal weld the union.

Owner K Falkland

Aureliano Tartaglione added a comment - 3 days ago - edited

The ODIN CUP SAT/SAR documentation shall be provided by Jesper Ringnér . I suggest him to be the assignee of this NIT Giuseppe Aprigliano . BR. Aure

Pin

Giuseppe Aprigliano added a comment - 2025-Dec-02 10:40 +0100

This comes from the CUP inspections, please check with CUP who eventually will haev to provide an approved SAR document for the entire system.

Pin

Robin Woracek added a comment - 2025-Dec-01 22:27 +0100

I don't know what this is about Giuseppe Aprigliano . Please advise of we can close this or keep open. Also please assign to a corresponding perosn.

Edit · Delete · Pin

Jesper Ringnér added a comment - 2 hours ago

For this task we consider it closed. The SAT document

Pin

Kristofer Falkland added a comment - 2 hours ago

Jesper Ringnér , Giuseppe Aprigliano , Robin Woracek

The tracker refer to the NCR 10551. Everyone can check the status of a NCR in our EAM system.

My view and understanding is that I have closed this. If this is not the case let me know.

=

### Proposed actions:

- a) Record the SAM protocol with the surveyed positions of the chopper fiducials and record it in the Chopper SAT document (so we know where the chopper is today)
- b) Create NIT for this issue to allow chopper SAT to continue. NIT **expected completion ORR, and proposed corrections based on SAM Survey report:**
  - o Change the installation drawings to align against the fiducial points (aligning against the pins and plane as per usual is impossible now that the full system is installed)
  - o Update a single chopper installation drawing to check the validity of the CAD model.
  - o Change the CAD model if required (based on the data from SAM).
  - o Update all installation drawings for choppers.
  - o Produce and release SAM reports

[Robin Woracek](#) added a comment - 2025-Dec-01 22:21 +0100

An engineer should be assigned to do this job - if needed. The instrument functionality is not impacted by this.

### Description

As part of the Chopper SAT we inspect that all critical fasteners have been tightened correctly, cable labels are correct etc. This was missed to double check and document during installation and since then the shielding has been installed. Suggestion to do this at the first opening of the shielding. System is working and behaving as intended.

Hi Irina Pavelic,

Take into account Dec 18th is ODIN iSRR meeting during the afternoon. The whole ODIN team would be unavailable, in case is required at the site for some of us to be there during the test.

Best regards,

Aureliano

Pin

Thank you Aureliano Tartaglione and Richard Ammer for the information.

The earliest available time slot for the test is Thursday, 18th December, and I have booked it.

Hi Irina Pavelic . New update: MShield personnel was yesterday on site to check the Hutch ventilation system. They will come back next week for the reparation work. Richard Ammer will be coordinating this task on site.

Irina Pavelic , Richard Ammer Just uploaded the drawings where the requirements to be met are detailed: 250 m<sup>3</sup>/h for the Control Hutch (Ground floor) and 150m<sup>3</sup>/h for the First floor room. I have drawn red arrows pointing to the figures to achieve.

- Passed SAT
- However, duorng tes for
- Ventilation downstairs hutch did not fullfill specs
- Once the test has been completed, the certificate can be issued within a few days.
- After that, I can submit the documentation to the Municipality (together with the other required documents, drawings, reports etc), and it typically takes about two weeks for them to issue the final **Owner of ODIN** (that is what is expected to be able to use the hutch).
- **Status** therefore, it would be helpful if you could **Implications for ODIN** relate to December when the ventilation system will be up and running.

IN REVIEW

ODIN lifting platform

ODIN

TG5/SAR

Richard Ammer

Robin Woracek

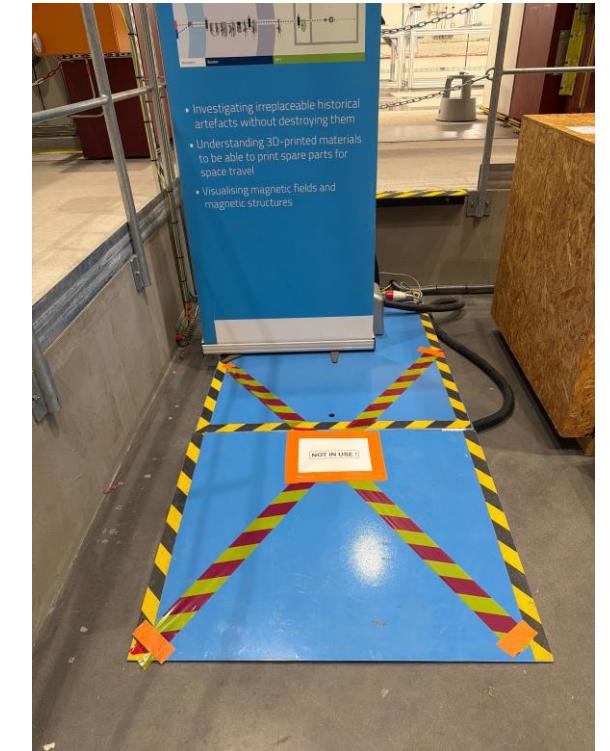

=

- Lifting platform was deemed potentially unsafe (despite passing all prior reviews)
- In any case, the instrument prefers to not have it:
  - Was never needed during installation as ramp is available.
  - Access can be better be used by fork lift if something that heavy comes in

▼ Robin Woracek added a comment - 2025-Dec-01 22:09 +0100

The platform has been marked with 'NOT IN USE' by Richard Ammer (until it will be removed later).

NIT-535 IN REVIEW ODIN beam stop -fence

ODIN

TG5/SAR

Richard Ammer 

Robin Woracek 

### Description

Monte Carlo simulations at 5 MW show that one ISO zone near the ODIN beamstop is slightly above the radiation limit. As a mitigation, a fence around the beamstop was proposed to prevent personnel from approaching too close.

Together with [Günter Muhrer](#), we agreed **not** to install the fence at this stage because:

1. RP needs free access to survey and characterise the radiation field around the beamstop; a fence would hinder this.
1. A fence would trap dust and dirt behind it, creating an activation hazard.
1. The fence is only required at 5 MW according to simulations (which already include safety factors), so it may never be needed. A final decision on installing the fence will be taken later together with RP.

**Owner: ODIN/RP**

**Status: monitor**

**Implication for ODIN:** monitor (fence is stored on ODIN roof)

### ▼ Description

The model has to be updated:

1. The position of the optics shall be verified against the changed alignment of the optics.
2. Some of the chopper flanges are not properly connected to the neighbouring vacuum chambers.  
It shall be corrected.
3. The system shall be verified against the FBS because we have suspicions about its correctness.

George Kontogiorgos added a comment - 2025-Dec-03 16:50 +0100

I was trying to understand this ticket and then I came with this wording:

We (ECDC) just picked one of the counter of the EVR to use it as source of the pulse counting NICOS device. Therefore, I think, this NIT ticket is an effort to reserve an EVR counter for that purpose, which is commonly agreed between ECDC, ICS and instrument teams.

Is this statement correct?

**Owner: ECDC**

NIT-585 IN PROGRESS ODIN Slits labeling

ODIN

Installation/SAT

Safaa Zaki 

Ruben Martinez Garcia 

=

### Description

During local test it was found that all slits systems were installed 90 degrees off compared to the documentation. It was decided that the slits are not going to be moved but documentation needs update and also the labeling of the cables. Also all the slits are missing the labels for the motors and resolvers.

ToM is already updated

Software is already updated (integrated test passed)

This ticket is addressing the next punch list items:

ESS-5768812 MCC2

- Punch list item 3, missing labeling
- Punch list item 4, slits blades direction
- Punch list item 5, slits installed 90 deg. off

ESS-5768833 MCC4

- Punch list item 3, missing labeling
- Punch list item 4, slits blades direction

**Owner: ODIN + MCA**

**Status: Slit itself** labelled by ODIN team, cable labelling to do  
**Implication for ODIN:** ok (HC possible as is)

### Remote Control via NICOS in ODIN cave

[Edit](#) [Add comment](#) [Assign](#) [More](#) [To Do](#)

#### ▼ Details

Type:  Task Resolution: Unresolved

Priority:  Medium

Labels:  ODIN

Instrument: ODIN

Discipline: ECDC

Issue source: TG5/SAR

Type: Other

To be resolved before: TG6/ ORR

Notes:

- ▼ Remote Control of NICOS via a designated tablet or similar from ODIN hutch is needed.  
Initially this was supposed to not be allowed, but now there seems to be consensus that this is vital among all stakeholders.  
This has been a high level requirement for ODIN from the beginning (see ESS-0129650; requirement 42).  
Creating a NIT, so this can be followed up on (especially as I will be leaving). Thanks!
