## 2. Metallic Guide

### 2.1 Aluminium

S-DH GmbH  
Hans-Bunte-Str. 8-10  
D-69123 Heidelberg

Neutron reflectivity of m2 supermirrors on Aluminium substrate

## 2. Metallic Guide

### 2.1 Aluminium

We manufactured more than 10 meter inpile-neutronguides with  $m=2$  coatings

## 2. Metallic Guide

### 2.1 Aluminium

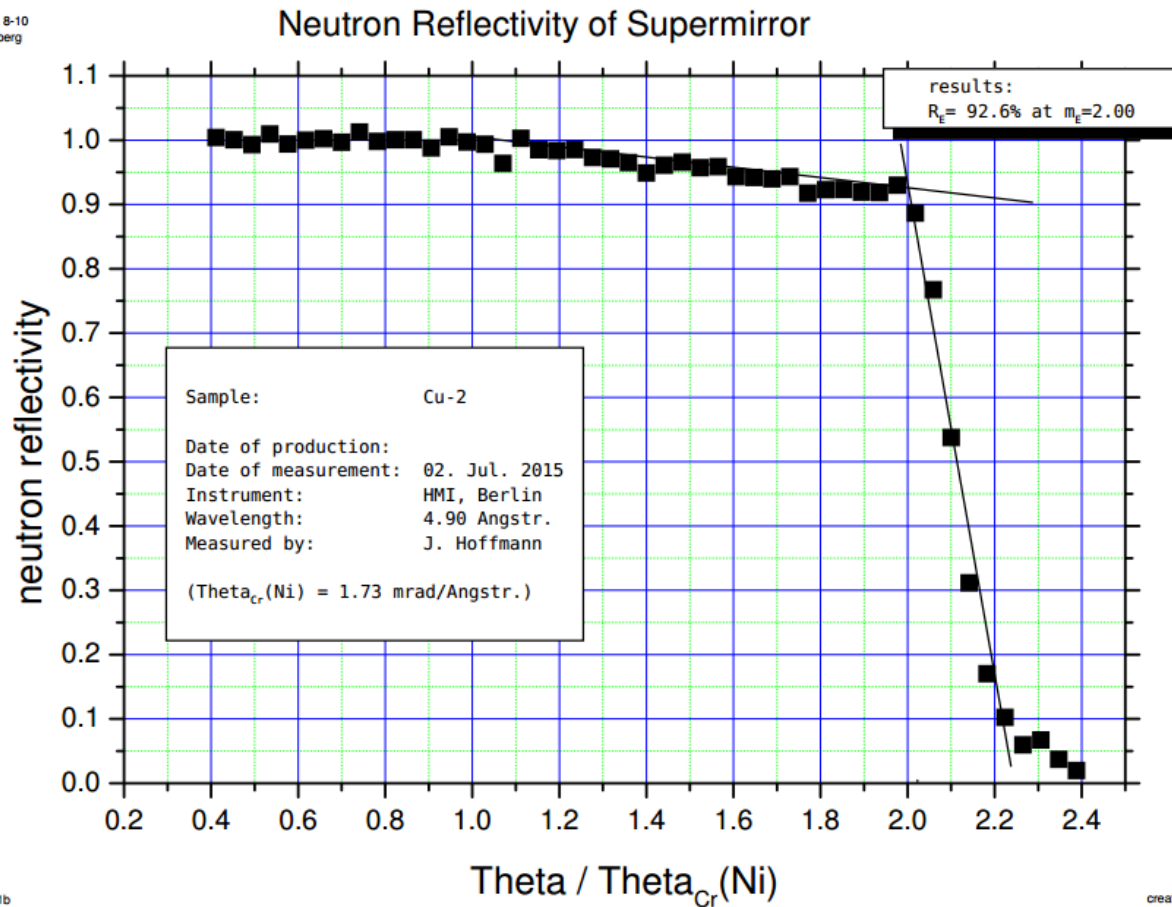

The Neutron Reflectivity over 63 measurements of  
 $m=2$  supermirrors : 92.8 %

## 2. Metallic Guide

### 2.2 Copper

S-DH GmbH  
Hans-Bunte-Str. 8-10

### 3. Glass Substrate

Glass Substrate used for neutronguides	Density Change *(1) (2) after sample penetration of about $1E18n/cm^2$ %	Lifedose *(2) with vacuum housing sample penetrating fluence $n/cm^2$	Lifedose *(2) with vacuum housing beam fluence $n/cm^2$
Floatglas, N-BK7, Schott	+1.3	$> 1.50E+17$	$> 1.00 E+20$
S-BSL7, OHARA	+1.3	$> 1.50E+17$	$> 2.00E+18$
Borkron N, Schott	-1.0	$2.77E+16$	$3.70E+17$
N-ZK7, Schott	-1.0	$2.77E+16$	$3.70E+17$
A88-66, Corning	-0.8		
K8, LZOS			
<b>Borofloat 33, Schott</b>	-2.0	<b><math>2.10E+15</math></b>	<b><math>2.80E+16</math></b>
Pyrex	-2.0		
Duran (Borosilikatglas 3,3)			

Measurements of density change: (1) W. Kaiser (2) J. Beaucourt, R. Boffy, M. Kreuz, U. Köster, F.J. Bermejo; Why neutron guides may end up breaking down? Some results on the macroscopic behaviour of alkali-borosilicate glass support plates under neutron irradiation ; Nuclear Instruments and Methods in Physics Research B

### 3. Glass Substrate

Following risk factors can reduce the lifetime of a glass neutron guide **up to two order of magnitude**:

- 1.) **Self evacuated**
- 2.) Stress because of weight
- 3.) Stress because of low or high temperature
- 4.) Stress because of mechanical load

**Use Borofloat only after a Chopper or a Velocity Selector**
