Boron Coated Straw Detector

- Proportional Technologies, Inc.
<http://www.proportionaltech.com/>
- Aluminium tube (d=25.4 mm, t=0.88 mm)
- 7 copper straw tubes (d=7.5 mm, t=25 μ m)
- $^{10}\text{B}_4\text{C}$ layer (1 μ m)
- Ar/CO₂ gas mixture (0.7 atm)
- Resistive wire

- 1-3 m length
- Readout at both end of the straws

BCS layout and model

- Optimal layout for parallel and small angle beam to increase path length in $^{10}\text{B}_4\text{C}$

Optimal configuration:
each panel offset 0.4"
from panel in front of it

12 Å	0.9530		0.0384	0.0071	0.0015

- Scattering effects are under study
- Preliminary results with reduced detector materials
 - 9.4% more detected neutrons without aluminium and copper
 - 1.8% more detected neutrons without aluminium
 - 7.3% more detected neutrons without copper
- 8 times more aluminium than copper in the detector
- 8 times longer average aluminium path than copper path

LoKI detector system

- BCS is a backup design for the LoKI
- McStas simulation:
 - 14 Hz
 - Short collimation
 - Diblock copolymer sample
- Geant4 simulation:
 - 5 m sample-detector distance

Conclusions

- The rate capability will be challenging
- Efficiency is a convolution of several parameters:
 - Energy and incident angle of the neutrons
 - Rotation of the tubes
 - Number and rotation of panels
 - Thickness of the detector components
- Detailed quantification of scattering effects is in progress

Thank you for your
attention!
